

In Europe, more than 1 million people live with Parkinson's

New, more effective treatments are needed

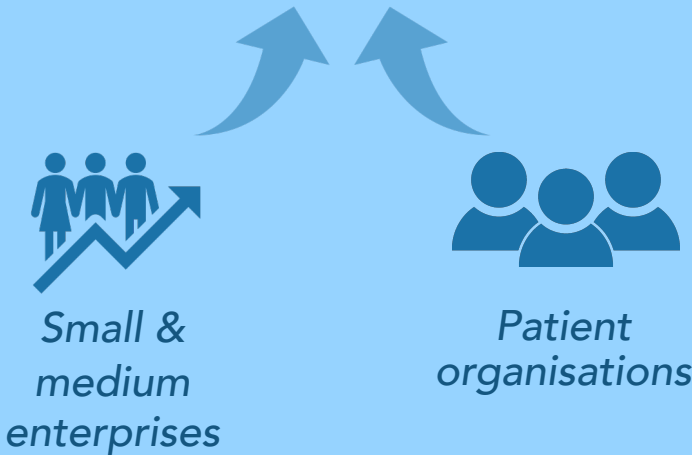

Mitochondria, the main energy supply in our cells, play a role in Parkinson's

Mitochondria may be a target for new therapies, but we need to learn more

**PD-Mito**  **QUANT**  
A public-private research partnership

We will explore how mitochondria are affected in Parkinson's

We aim to develop new tools for drug discovery and better medicines

## Academic partners

## EFPIA partners

## Patient organisation

## SME partners
